Workflow Automation

PulseID Workflow Automation for embroidery, digital print, laser and rotary engraving provides the essential business intelligence and connectivity you need to boost productivity and manage your production floor. PulseID's robust design downloading solution lets operators pull designs directly from your centralized database using a barcode scanner, while detailed dashboards and reporting systems are available to track the efficiency of individual machines, designs, and operators. The Workflow Automation solution ensures that your production floor is finely tuned to maximize profitability.

Pulse has extensive experience in providing easily manageable networking solutions that are compatible with all major equipment brands. Networking technology developed by Pulse is installed in thousands of businesses worldwide, enabling companies of any size to take full control of their production floor and optimize day to day operations. PulseID is an easily expandable solution that will grow along with your business, and is capable of handling hundreds of thousands of orders at a time.

Workflow Automation

Operator Efficiency

PulseID Workflow Automation gives machine operators the ability to pull designs from your centralized database directly to their machines using a barcode scanner, eliminating the tedious design retrieval process. Needle assignment is easily updated with the PulseID Machine Companion app. Workflow Automation also provides invaluable reporting on the efficiency of your machine operators as they complete orders using multiple machines at once. Create detailed reports or view up to the minute statistics for any operators logged in during a selected period of time, and use these statistics to set production goals, accurately quote future jobs, and motivate machine operators to get the best productivity possible.

- Pull designs from a centralized database
- Eliminate design retrieval time
- Eliminate errors caused by manual inputs
- Automatic needle assignment
- Enable employees to operate multiple machines simultaneously
- Track operator statistics

Machine Statistics

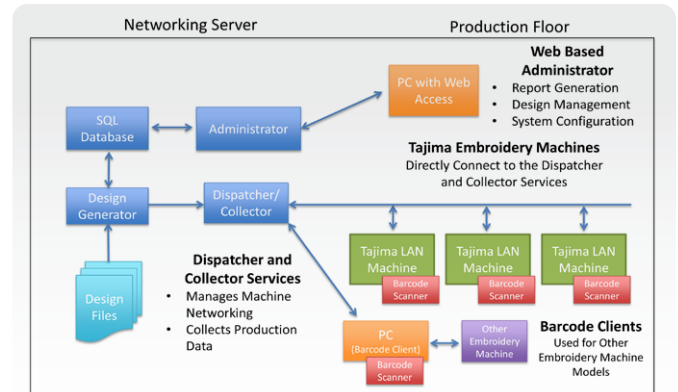

PulseID Workflow Automation enables you to monitor each and every detail of your machines, from the current operational status, to a history of designs the machine has sewn out. Produce comprehensive productivity reports through the browser-based console, and view the current design the machine is working on from anywhere in the world.

- Total running time
- Total machine down time
- Total stitches produced
- Total number of runs
- Number of pieces completed
- Stitches per hour
- List of completed jobs

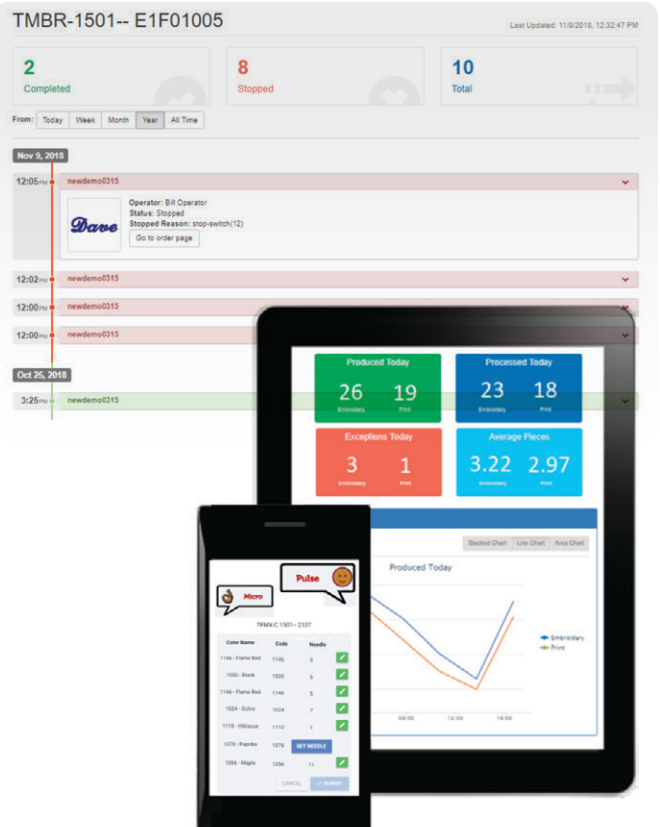

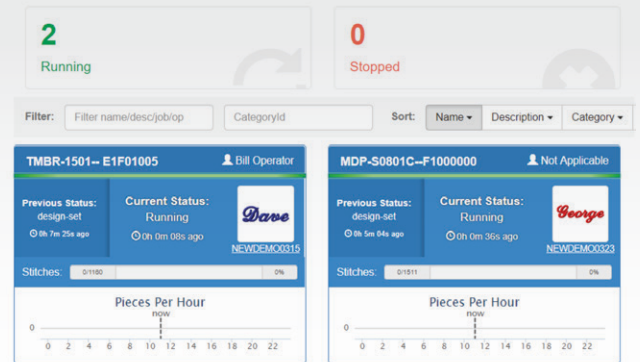

Manager Benefits

Make informed decisions for machine and operator scheduling with up to the minute data sent directly from your embroidery machines. Monitor machine downtime and respond to potential issues before they affect your production cycle.

- Easily monitor machine and operator efficiency
- Save reports as XLS files or monitor production remotely
- Access from any device using a modern web browser
